Farm Topics

Storage of Surplus Fowl is Profitable

Poultry Held in Locker For Sale at Price Peak

To assure that poultry of various classifications is properly held in locker plants or freezers, it is advisable that the fowl be wrapped in water-proof, moisture-proof paper.

Latest scientific methods call for enclosing the fowl in a strong mesh fabric, known as stockinet, which keeps the prepared locker paper tightly pressed around the chicken, thus eliminating all air pockets inside the wrapping and preventing the paper from becoming loose at any time.

Poultrymen and farmers with a surplus of poultry have found at

profitable to place some of the birds, as well as game fowl, in storage for their own consumption as well as for sale to local markets when prices become higher.

Considerable demand has been found for ducks, geese and turkeys as well as for chickens.

During the past few years some poultry raisers have found an excellent market for smoked fowl and a most satisfactory market price.

Only quality fowls should be so stored and handled, and then only when proper wrapping material is utilized and proper storage facilities are available.

Modern Agronomists Debunk Copybook Line

"Hay is dried grass." That line invariably appeared in copybooks handed out to pupils in old-time writing classes, but agronomists at Ohio State university claim the copybook publishers apparently knew considerably more about teaching pupils to write than they did about haymaking.

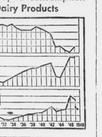
Some dried grass is excellent livestock feed but other cured grass is just fair quality bedding, agronomists insist.

The best time for cutting hay is when plants have made almost their greatest growth in weight but still contain a high percentage of protein. For red clover, the recommended cutting time is when the plants are in the half bloom stage. The most hay of high quality will be hauled from the alfalfa field if cutting is started before the half bloom period.

Renovated Tractor

This steel shod tractor was in good operating condition, so the farmer decided to adapt it for rubber tires. The tires, tubes and rims cost $119. In addition to the new agricultural implements being purchased this year, many are being re-modernized.

U. S. Per Capita Consumption of Dairy Products



Thinning of Vegetables Assures Best Growth

Most gardeners make the mistake of not thinning their vegetable rows sufficiently. They hate to pull up part of their plantings and thus allow all of the seedlings to be crowded. Thinning should be done when the soil is moist and the seedlings are one to two inches tall. If taller than two inches, don't pull them up; cut them off at ground level for best results.

Spout Spring

Spout Spring, July 20. Mrs. Virginia Rhino, of Tennessee is visiting in the home of Miss Sue Davidson.

H. B. Martin and family are spending this week at Virginia Beach.

Mrs. John Cyrus, of Lynchburg, and Mr. and Mrs. W. A. Moon were Sunday guests of Mr. and Mrs. D. H. Cyrus.

Miss Sue Davidson, Mrs. Virginia Rhino and Mrs. George Carson visited in the homes of Walter Carson and Mr. and Mrs. Lyle Caldwell last Thursday.

Miss Florence Layne is spending this week at Virginia Beach. She was accompanied by Miss Dorothy Roberts, of Concord.

Mrs. W. T. Steele and Mr. and Mrs. Burke Steele and children were guests of Mr. and Mrs. Dan Thomas Sunday.

W. E. Layne, Jr. spent his vacation here last week.

Milky Disease, Chemicals, Check to Japanese Beetle

Roughly a third of the people of the United States live in states in which the Japanese beetle is now a serious pest. Quarantine has slowed its advance, says the U. S. department of agriculture, but spread is likely to continue until another third of the people have unwillingly made its acquaintance.

At its worst the beetle is an important crop destroyer. The grub stage seriously injures the roots of grass, and the adult beetle feeds on many kinds of flowers, shrubs, and trees in home grounds, parks and pastures. Chemicals and the milky disease are used for control and protection.

Bacteria cause the milk disease which attacks and kills beetle grubs. Inside the bodies of diseased grubs, the bacteria form spores which live for a long time in the soil. Spores mixed with talc can be placed on the turf in recently established infestations. As an increasing number of grubs become infected and die, more spores are left to kill succeeding broods. This accounts for the decline in the beetles. Spore dust may be used at any season except when the soil is frozen.

Research by the bureau of entomology and plant quarantine showed how to manufacture spore dust. Standardized commercial dust supplies 200 million spores to a scant teaspoonful. Spot-planted, this dust gives relatively good protection to turf after a few seasons. The dust does not directly affect adult beetles, but no adults emerge from diseased grubs.

U. S. Wheat Champions Honored in Minnesota

Millions of fungi are in the two tiny dishes held by Dr. J. J. Christiansen, professor of plant pathology, University of Minnesota, as he explains disease control to W. A. Brown, left, national wheat cham-

pion, Pierce, Colo., who with his son, Norman, won the national Pillsbury title with samples from their 1,600 acre farm. Tom Ridley, national reserve champion, Langdon, N. D., center, was with durum wheat in competition with wheat farmers in 13 states.

Precautions for Dipping Sheep Are Suggested

Among rules to be followed when dipping sheep are: Fast the sheep several hours before dipping. Don't dip sheep immediately on arrival at the bath if they have become heated. Don't dip sheep in an arsenical bath if they have open wounds. Don't put the sheep in the bath head first. Prepare the bath strictly in accordance with instructions on the package and mix thoroughly.

Pacific Grave for Heroic Cruiser

Because of radio-activity, one of the navy's proudest fighting ships, the Salt Lake City, our oldest heavy cruiser, was sent to the bottom of the Pacific ocean. She was hero of several of the principal engagements in the Pacific war and a survivor of the Bikini atomic bomb tests. Her crew claimed she was the first ship in Adm. William Halsey's "shoestring" raid of February 1, 1942, to open fire against Wotje Atoll in the Marshall islands. Although stationed only 400 yards from the central battleship, Arkansas, during the underwater bomb tests, she survived.

IN MEMORIAM
JAMES ABNER MARTIN

In sad but loving memory of my dear husband, James Abner Martin, who departed this life one year ago today, July 24, 1947.

An aching heart, a falling tear,
Marks the passing of another year.
When shadows are falling,
And I am alone,
In my heart there is a longing,
If you could only come home.

I pray and know that you are in that
Heavenly Home on high;
And I am praying to meet you there,
In that sweet b.e and bye.

His devoted wife,
Mrs. Bertha W. Martin.

7:00 P. M., Training Union.
8:00 P. M. Evening Worship. Sermon by the pastor.

The quarterly business meeting of Evergreen will be held Saturday, July 24, 2:30 P. M.

Revival services will be held at Evergreen the week of July 25-30, inclusive. Rev. Carl A. Collins, Jr., former pastor and now of Fort Worth, Texas will lead these services. Cordial welcome to all.

CHURCH NOTICE

Dr. Clarence Shelby, of Flemingburg, Kentucky, will conduct services at Old Concord Presbyterian Church Sunday, July 25th, at 3:00 P. M.

Tagging Western Fish

Salmon, striped bass and sturgeon now are being tagged in the San Pablo bay by the California division of fish and game. A commercial gillnet boat is being used to catch the fish. Return of tags from the marked fish released by the division will be used to evaluate the probable damage to the salmon and striped bass fisheries by proposed dams and other projects. The San Francisco Tyee club is cooperating with the division by marking salmon outside the Golden Gate with tags furnished by the bureau of marine fisheries. A reward of one dollar is offered by the state for return of each salmon tag, and the Tyee club has added rewards of from 10 to 50 dollars on several tagged fish.

Grass Silage Offers Benefits to Dairymen

Advantages Are Shown In Wisconsin Research

Twelve positive advantages that grass silage offers dairy farmers were compiled as a result of tests conducted by Wisconsin FFA chapters and Kraft. Some of the decided advantages were:

Grass silage preserves as much as 30 per cent more protein of alfalfa.

There need be no loss of the crop through rainy weather at haying time.

Crop may be saved in a more orderly manner and labor distributed more evenly.

A grass silage program helps in control of weeds because it destroys the viability of weed seeds.

A grass silage program makes the control of erosion and insect pests easier.

It can be used to preserve the feed value of weedy crops.

It can be used to give pastures a much-needed rest period in the fall.

Grass silage makes for more vitamins and more color in winter milk and butter than either corn silage or sun-cured hay.

Mr. and Mrs. R. N. Dawson have returned from their vacation at Grand Beach, N. J. and Philadelphia.

Mr. and Mrs. Al Luck have announced the birth of a son, born at Virginia Baptist Hospital Wednesday, July 21.

U. S. Travelers Surprised At Holland's Orderliness

Americans who have returned from a visit to The Netherlands this past year have spoken with admiration and amazement of the country's physical and social aspects, which were utterly contrary to the conditions they had expected.

What excited their astonishment above all were the orderliness, the neatness and normalcy of daily life, both in the cities and rural areas.

Coming from other war-ravaged European countries, as many of these travelers did, they found it hard to convince themselves that Holland had suffered more intensely from the war, that it had been the last country to be liberated, and that its postwar economic situation is beset with seemingly insuperable difficulties.

Strikes there have been and they still occur in Holland, but they have been sporadic and have not affected the greater majority of workers. Instead, there has been closer collaboration between management and labor than ever before in the history of the Dutch labor government.

David T. Robertson, of National Photo Service an Supply Co., Appomattox, stated today that he had received a telegram from Jerry Fairbanks, of Popular Science News Reel, of Hollywood, California, advising that they would like to visit Appomattox and make a technicolor news reel of the work of the local plant. Under a new method, Mr. Robertson is featuring photography on china plates, wood, etc.

Home Dressmakers Urged To Avoid Homemade Touch

Any homemaker who sews wants her garments to have a professional look. Yet, many garments made at home have the homemade touch, a term that clothing manufacturers use to describe incorrectly-made clothing.

A few simple tricks used in making a garment at home will result in a professional looking dress or suit, according to Miss Mabel McDowell, extension clothing specialist of the Pennsylvania State college.

She points out that one of the common errors in dressmaking is cutting the cloth so that the grain does not fall perpendicular to the floor. This usually happens when a homemaker has cut the material on round or narrow surfaces where the fabric will not lie flat. Moving the pattern off the grain in order to save material is another cause for this.

Stretching the fabric while making a garment can make the difference between the professional and the homemade touch, too. Professional clothing makers use machine-stitched staylines. Staylines are reinforced lines around all necklines, armseyes, shoulders, waistlines, and plackets. Staylines, sewed before putting the garment together, are placed just inside the seam line, between the seam line and edge of material, and are always stitched with the grain of the material.

Do Not Minimize on Space When Planning a Bathroom

When planning a bathroom, don't short-cut on space needs.

For safety and convenience, every bathroom needs space for the door to open full width, space enough between fixtures for a person to move around and clean them easily, and adequate space for storage cabinets and towel rods.

The minimum spaces around fixtures are given here, with the added comment that more space is desirable if it can be arranged.

Two feet between the front of any fixture and the wall across from it; one-and-a-half feet between the front of the lavatory and the front of the water closet; a floor area of 30 inches along the side of the bathtub by 20 inches, for a person to clean the tub.

At sides of fixtures, for cleaning there should be at least: two inches between closet tank and lavatory; three inches between closet tank and tub; four inches between closet tank and wall at side of it; six inches between lavatory and wall.

Make cut-outs of brown paper or newspaper exactly the size of the size of the fixtures selected. Then arrange the cut-outs on the floor of the room to be used for a bathroom, or on a floor space of the same size, until the best arrangement is found.

Fluoroscopic Examination

To make a fluoroscopic examination, the physician places the patient between the x-ray tube and a fluorescent screen. He then flicks a switch, sending the required amount of radiation through the patient's body. Some x-rays pass right on through and strike the fluorescent screen, creating light rays. Other x-rays are absorbed by the thicker, more opaque parts of the body and do not reach the screen. So what the physician sees is a shadowgraph of the internal organs.

Honey In Freezing of Fruit

Honey is especially well suited for use in the freezing of fruit. Honey not only helps preserve fruit but gives additional food value. Select a mild flavored honey which will enhance the flavor of the fruit. The flavor depends upon the kind of flowers from which the bees gather nectar. Honey producers frequently mix several honeys by heating moderately and stirring to produce a blend with a flavor which is most satisfactory. On sliced or crushed fruit use one part of honey to four or five parts of the fruit. On whole fruit add one cup of water to each two cups of extracted honey and then use just enough of this diluted honey to cover the fruit.

USDA Offers Suggestion On Flying From Freight

Farm areas that have been cut off from the fluid milk market because of transportation delays will be interested in a British proposal to use "flying milk vans," says the U. S department of agriculture.

Western growers of irrigated alfalfa might find it practical and economical to put wings on the aerial equivalent of the tank truck.

The office of foreign agricultural relations says that the cost of proposed air transportation of milk over certain routes in Britain has been estimated by aviation company experts at about four cents a quart.

It is proposed to use a Bristol freighter modified to pick up a specially constructed cylindrical metal tank lined with glass and holding 1,100 gallons. The tank would be mounted on a wheeled chassis for quick and easy loading and unloading.

Another example of an innovation in air freighting of farm produce is reported from Brazil. The Japanese district is a center of the Brazilian "carque" or dried meat industry. The fillets of beef are too tender for marketing as dried beef. With air freight it is proving possible to ship the choice fillets to sao Paulo, a trip of about two and a half hours.

This form of marketing has proved so satisfactory that OFAR reports shipments may increase when the air terminal is improved to accomodate larger planes and heavier loads.

Butter and grain prices dip in markets.

We have an opening for a young woman experienced in dry goods, notions, shoes, who can be trained to buy in these lines. While experience is preferable it is not essential and we will be glad to consider your application. This is a permanent position. We also have some openings for week-end and extra employment.

YEAKLEY - LeGRAND

Miss Elizabeth Lobelia LeGrand, daughter of Mr. and Mrs. William Joseph LeGrand, of Appomattox, became the bride of Forrest Luther Yeakley, son of Mrs. Martin Luther Yeakley, of Martinsburg, W. Va., and the late Reverend Yeakley, in a garden wedding on Saturday, July 17, at 4 o'clock, at her home. The Rev. J. Marshall Walker officiated. Mrs. Claude W. Smith, pianist, and Miss Nancy Stuart Scott, soloist, presented a program of music before the ceremony.

The bride, who was given in marriage by her father, wore her mother's wedding gown of ivory satin and valenciennes lace with matching mitts. Her finger tip veil of illusion fell from a coronet of orange blossoms. She carried white roses and stephanotis.

Mrs. Robert Lyle Carter, of Roanoke, sister of the bride, was matron of honor. She wore aqua taffeta and carried yellow roses showered with baby's breath.

Foster Surface, of Fairfax, served as best man.

A reception was held after the ceremony.

After a northern wedding trip, the couple will be at home in Falls Church.

GARDEN CLUB

The Appomattox Garden Club members are invited to "Redlands" the home of Colonel and Mrs. W. A. Coleman, for their next meeting Tuesday, July 27, from 4:00 until 6:00. This will be an ourdoor garden party.

The joint hostesses will be Mrs. Richard Janatka, Mrs. J. A. Burke and Mrs. C. D. Staples.
